WebAble Artificial Intelligence Usage Approval Form

Faculty advisor review and approval of the team's planned use of artificial intelligence

Course	CIS CEN 4914 Senior Design
Term	Fall 2026
Team	WebAble
Faculty advisor	Dr. Dung Tran

Team members: Rainier Joshua Tabelon, Caden Shokat, Fernando Fiallos, Belal Mansour, and Katherine Boetig

Purpose

This form documents WebAble's planned use of artificial intelligence as both a feature of the product and a development tool. The team requests the faculty advisor's approval of the scope and safeguards below.

Planned Use of Artificial Intelligence

- **AI within the WebAble product.** WebAble will use AI and machine learning to infer accessibility needs from user interactions and preferences. At the user's request, a language model may generate adaptations to the presentation of a website while preserving its underlying content and functionality.
- **AI for development and planning.** The team plans to use tools such as ChatGPT Codex and Claude Code for code generation, project scaffolding, feature planning, unit-test generation, and front-end design iteration. On-device models, including Gemini Nano or comparable alternatives, may be evaluated for the product.

Expected Extent

Including product functionality and development support, the team estimates that AI-assisted or AI-generated work may account for approximately 80 percent of the project. This is an estimate of the planned scope, not a substitute for team review, understanding, testing, or responsibility.

Limits and Team Responsibilities

- AI will not be used to generate graded written deliverables, including the project proposal, technical report, presentation content, or team contract.
- No team member will commit code that they cannot explain, regardless of how the code was produced.
- Team members will review and test AI-assisted code before it is merged into the project.
- The team will use GitHub, pull-request review, automated linting, and tests to maintain accountability for submitted code.
- Secrets will not be entered into AI tools or committed to the repository. User data will be minimized, with a preference for local and on-device processing.

Advisor Approval

By signing below, I acknowledge and approve the WebAble team's planned use of artificial intelligence as described in this form.

☐ Approved as described ☐ Approval withheld pending revision
