A practical recruitment plan

Start with local community programs. Recruit mainly adults **50+ with actual difficulty tapping small or closely spaced controls** on phones or tablets. Travel to them for short sessions.

First contacts, in order

Recruitment route	Verified contact	Specific request
1. Senior Recreation Center Tech Time with Kendyll Program listing	**Lynde Stevens** 352-265-9040 lynde.stevens@ufhealth.org Staff directory	Ask the technology organizer for a brief voluntary invitation and separate appointment space.
PrimeTime Institute Adults 50+; same center pool Program and contact	**Susan Williams** 352-214-6219 primetime.inst@gmail.com	Ask for member notice circulation and an announcement at a suitable event.
2. Oak Hammock ILR Community members as well as residents ILR overview	**Nicole Barabas** 352-548-1008 nbarabas@oakhammock.org Contact listing	Request the ILR coordinator and a notice to interested members.
3. Alachua libraries Headquarters or Millhopper Library locations	**Headquarters** 352-334-3900 **Millhopper** 352-334-1272	Ask Adult Services about permitted notices and booking a small room. Screen for age and tapping difficulty.
4. CILNCF Targeted functional-fit backup Contact details	**Gainesville office** 352-378-7474	Request voluntary circulation to interested older adults with hand-control difficulties.

The first two programs may share participants. Add an independent source. Notice distribution, rooms, fees and required documentation are unconfirmed. This plan does not depend on hospital-patient recruitment.

Near-term opportunities

October 8, 2:30-4 p.m.: PTI lists a Dracula radio play in the Multipurpose Room. Ask the organizer about an invitation before/after the event. Fall program schedule

October 12, 1-3 p.m.: next expected Tech Time session from the published Monday recurrence. Confirm before traveling. Center address: **5701 NW 34th Boulevard, Gainesville**. Center details

STUDY SCOPE / PROJECT STATUS / PRODUCT UPDATE

Decisions for today

Mobile delivery and the research question

Google says Chrome extensions cannot be installed on mobile devices. The current WebAble extension is a desktop Chrome build. Tune already contains touch tasks, so choose **mobile calibration/usability** or a **controlled mobile adaptation prototype** as the phone study. The prototype must exist before booked sessions. Google compatibility

The exemption route

UF offers an automatic exemption/nonresearch determination route. Keep an existing determination, or use the appropriate UF process with Dr. Rani. Exemption 3 is a plausible candidate for brief voluntary adult behavioral tasks; the exact procedure and data collection determine eligibility. Instruction-only classroom activity is a separate classification. UF tool | OHRP explanation | UF classroom guidance

Working study proposal

3 pilots + 12 main sessions, about 35 minutes each. Proposed exploratory numbers, with no power claim. Screen age, mobile use and actual tapping difficulty. For an adaptation comparison, use matched tasks, the same device, and balanced baseline/adapted order. Record wrong activations, completion and ease. Keep personal content out of study tasks.

Planning budget: $20 for each of 15 sessions = $300; allow $40-60 for local travel/printing. Confirm funding, payment administration and any room charge before promising an incentive.

Schedule toward an internally finished project

By	Deliverable
October 16	Resolve scope/status and host requirements. Secure one route and a backup; run pilots once cleared.
November 6	Complete the proposed main sessions. Review recruitment progress by October 30.
November 13	Close make-ups and finalize the actual sample.
November 20	Finish analysis, writing, advisor feedback and demo rehearsal.

November 26 is your tentative deadline. UF lists Thanksgiving break November 23-28; confirm the course/project due date today. UF calendar

Product update and 3-minute extension demo

Extension 0.1.1: 293 unit tests, the type check and 3 browser scenarios plus build setup passed today. Those scenarios checked navigation adaptation, saved-fit updates on an open page, and readable popup sizing. Local fixtures only; production and smartphone behavior remain unverified.

Demo sequence: baseline page, saved-fit changes, persistence during navigation, then Undo/Redo and pause controls. Rehearse in the meeting browser profile. Agree the mobile intervention, exemption/nonresearch documentation, sample/budget and confirmed deadline before leaving the meeting.
