WebAble: Team Contract

Overall Objectives

Our senior project aims to develop an AI-powered personalized web accessibility system that adapts websites to the individual needs of each user. Rather than requiring every website to independently support different accessibility needs, our system will act as a personalized layer between the user and the websites they visit, modifying how websites are presented while prioritizing having no content loss, no functionality loss, having reversibility, and respecting user authority. We will ground design decisions in documented user needs by developing research-based personas across multiple accessibility needs, and validating our implementations with users who have those needs rather than relying on our own assumptions as well as adhering to the Web Content Accessibility Guidelines (WCAG) . We will handle user data under principles of data minimization and privacy by design, with a focus on local, on-device processing so that the user never surrenders their sensitive information. The system will use AI/ML to learn from user interactions and accessibility needs and determine how interfaces can be better adapted for different users, including those with visual, motor, cognitive, or age-related challenges. The project will initially focus on the Chrome browser, with the broader goal of exploring how web interfaces can move beyond simply responding to screen size and instead adapt to the person using them.

Individual Role and Responsibilities

RJ Tabelon – Back-End

- Will lead back-end development including architectural decisions and database design

Caden Shokat – Team Lead / Full-Stack

- Lead product vision and scope.
- Contribute across the stack to all aspects of the project.
- Serve as primary contact for advisor.

Fernando Fiallos – Front-End/ Quality Assurance

- Assist in front-end development.
- Ensure product is meeting expectations.

Katie Boetig – Scrum Master / Front-End

- Lead front-end development and implement user-facing features with a focus on accessibility and usability
- Facilitate Scrum ceremonies, coordinate team tasks and deadlines, and track progress toward sprint goals

Belal Mansour – Full-Stack

- Assist in both back-end and front-end tasks, PRs, and designs
- Help build integration testing for the application

Values and Agreement Statements

- Respond to each other within 24 hours even if it's just to notify them of their unavailability till a specified date.
- For the sake of documentation meeting notes are going to be recorded and contain things like decisions made.
- Missed deadlines to be communicated before deadline, not the meeting after.

Software Configuration Management Protocol

- All source code stored in GitHub
- Detailed PR title and description
- Branches should be named after the feature (Branch naming template: [username/feature-name], Ex: rjtabelon/update-home-button-style)
- Automated linting + test suite run on every PR
- Secrets never committed
- Every PR must be reviewed by at least 1 other person

AI Usage Statement
We plan to use AI for this project in two distinct areas.

AI as a feature in our product.

- WebAble will use AI/ML to infer a user's accessibility needs from their interactions and preferences, and call an LLM at request time to generate adaptations of a website's interface.

AI as a development + planning tool.

- We will use AI for code generation, feature planning, writing unit tests, and front-end design iteration.

We estimate that, including all aspects of AI usage outlined above, AI generation will account for around 80% of the project.

This estimate excludes written deliverables such as the project proposal, technical report, presentation content, and this contract.

- Written deliverables such as the project proposal, technical report, presentation content, and this contract.
- No team member will commit code that they cannot explain, regardless of how it was produced.

Meeting Day/Times
We will be meeting weekly every Thursday from 4-5 PM

Meeting Dates/Times With Advisor
We will meet bi-weekly with our advisor on alternating Fridays from 4–5 PM, beginning 9/11/2026.

Facilitator
Everyone will have a chance to facilitate our bi-weekly meetings with our advisor. We'll take turns facilitating each meeting in the following order:

Caden → Fernando → RJ → Katie → Belal

Once we reach the end of the list, we'll repeat the rotation.

Communication
We will communicate on Discord for all project needs.

Conflict Resolution Protocol

1. Try to solve it privately with the person you're having a conflict with first
2. If you can't resolve it privately, then you can involve the rest of the team to discuss the issue and a majority vote will be held
3. If the issue still isn't resolved, then the team will escalate it to our faculty advisor, and if still unresolved, to the course TA or professor

Consequences

We will have weekly ratings of each other's performance. If a team member consistently has poor engagement and participation ratings, we will resort to:

1. First violation: Verbal Warning
2. Second violation: The person will be required to take on additional responsibilities
3. Third violation: Report to project advisor
